

# The Most Powerful Apple Device Management Platform for MSPs and IT Teams

Addigy was designed from the ground up to effortlessly manage and secure all of your Apple devices—macOS, iOS, iPadOS, and tvOS—across multiple clients, teams, and locations. From remote support to ongoing maintenance, Addigy has the flexibility and functionality you need to securely manage and scale your Apple fleet.

## Cloud-based

So there's no need to maintain your own infrastructure or servers

## Multi-tenant

To easily manage multiple organizations

## Automated Device Enrollment

For seamless onboarding of devices out-of-the-box

## macOS Agent

More than simply MDM, the Addigy macOS agent allows you to work with macOS devices as if you're sitting at the keyboard

## Zero Touch Deployment

With Apple Business Manager and Apple School Manager integration

## PPPC Profiles Distribution

Automatically generate the necessary PPPCs to deploy with the custom software you need to deliver

## Real-Time Device Management

Get real-time access to every device

## OS Patch Management

Quickly review relevant updates and keep devices up-to-date

## Software Deployment

Deploy almost any software or settings to one or more managed devices at the same time

## Public Software Catalog

Access and deploy commonly used third-party applications with just a few clicks

## Remote Access

Immediately launch a remote control session with a managed device

## Remote Terminal

Launch terminal access with a single click with LiveTerminal

## Remote Monitoring

Monitor for anything that falls outside of your security standards

## Automated Remediation

Resolve monitoring issues automatically

## Group Policies

Create, configure, deploy and delete policies quickly and easily

## Remotely Lock or Wipe Devices

Immediately lock or wipe devices remotely to protect critical data

## Always-on Compliance

Enforce security settings to maintain always-on compliance

## Password Resets

Automate password resets without the need for a technician

### Unlock Devices

Unlock devices remotely

### Automated Maintenance

Run regular maintenance tasks automatically on a predetermined schedule

### LiveDesktop

Create a secure, remote live session with a Mac without end-user interaction or approval

### GoLive

Provides IT admins with a single page to manage a device

### Self-Service

Allow end-users to install admin-approved applications, run pre-loaded scripts, request support, and get notifications for maintenance

### Identity Management

Access to Addigy and macOS devices for users with already familiar and secure identity provider credentials (supports Okta, Google, AzureAD, O365, and SAML based providers)

### Third-Party Patch Management

Keep commonly used third-party applications patched automatically

### FileVault Encryption

Encrypt macOS devices with FileVault and escrow the keys to prevent unauthorized users from copying data off the drive

### Asset Management

Know what Apple devices are in your environment and access them with a single-click

### Reporting

Access built-in reports or build customized reports to suit your needs

### Addigy Community

Copy and paste open source queries, scripts, monitors, and maintenance tasks created by other Addigy users

### Third-Party Integrations

With commonly used enterprise and MSP vendors

### API

Open API that allows you to integrate Addigy with your existing systems

### Proven Scalability

Tens of devices to many thousands of devices—whatever you need when you need it

## Try Addigy FREE for 14 days.
