

Liberate Your Customers from the Pains of Passwords with the Power of Secret Double Octopus

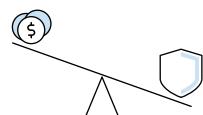

Simple & secure passwordless multifactor authentication.

Deploy Secret Double Octopus – a single passwordless solution that covers all use cases, legacy services included

Make managing passwords a thing of the past with its simple “touch and go” experience

Break the paradigm! Achieve better security and better usability at a lower cost!

Not your average band-aid 2FA.

Most current MFA solutions leave your customers and their users at the mercy of passwords — including them as authentication factors. Those that natively integrate with web applications without passwords can't be used with legacy applications and other resources. Adaptive authentication solutions layer additional user challenges on top of the password.

These legacy multi-factor authentication solutions aren't solving a multitude of security, user, and cost challenges. **Secret Double Octopus does.**

Click-to-provision, passwordless authentication for SMBs — an industry-first — **and only available through CloudPlus.**

“By 2022, 60% of large and global enterprises, and 90% of midsize enterprises will implement passwordless methods in more than 50% of use cases - up from 5% in 2018”

Gartner | Ant Allan
Vice President Analyst

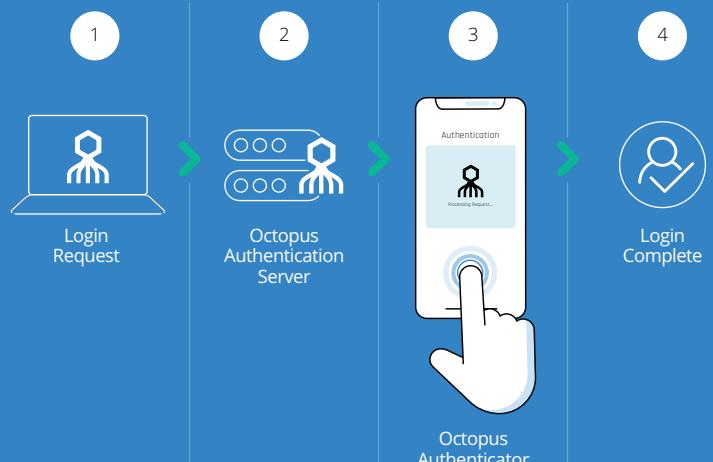

Passwordless MFA for SMBs.

Previously only available to Enterprise customers with an on-premise deployment, the CloudPlus + SDO partnership brings this technology to the SMB market.

- Users never have to recall or enter another password.

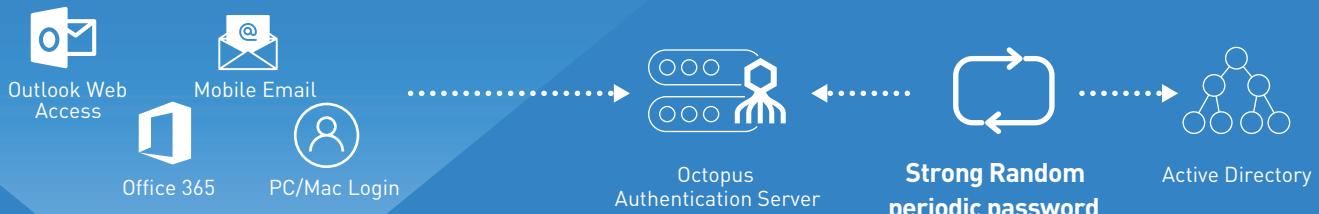

To authenticate, users simply approve a push notification and verify using their biometric print on their mobile device. The rest happens automatically behind the scenes.

No-phone and off-line use cases are fully supported.

The Only Passwordless Solution that Supports On-Prem Active Directory

Octopus Authentication for Windows and MacOS
ensures passwordless MFA is defending all enterprise resources

The CloudPlus Difference

The CloudPlus platform is a true fulfillment platform for hosted services — allowing for not just the initial acquisition of a service, but for the management of those services: identity management, license management, authentication, policies, reporting, and the like.

The platform was built with a unique, click-to-provision technology, meaning your customers' hosted services are ready to consume with just a few clicks. No more filling out forms. No more waiting for a service after it's ordered.

This technology combined with the our multi-tenant implementation offers an industry first. **Passwordless authentication for the SMB:**

- A tried and true technology through a tried and true distribution platform
- Previously only available to companies (1000+ seats) with an on-premise deployment
- CloudPlus invented the first ever multi-tenant approach
- Click-to-provision technology shortens an individualized implementation that might takes week to under an hour
