Drag. Drop. Done.

CAN YOU DO THAT WITH SHAREPOINT DESIGNER?

Nintex Workflow blends power and simplicity into a single tool.

SharePoint's potential can be constrained by the workflow design tools you use.

Most tools are too complex and cumbersome, and lack the sophistication you need to automate your business processes. Building workflows in SharePoint Designer is not intuitive and if you are building complex workflows, it needs a lot of development effort.
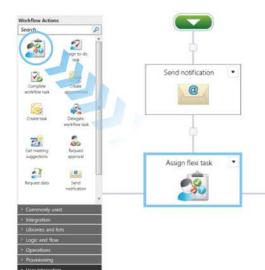

With Nintex, you get the power of Visual Studio in a tool that's robust and intuitive. And the best part? You can do it all in with the SharePoint infrastructure you already have.

Nintex gives you:

- An intuitive, drag-and-drop workflow designer to build workflows the way you think

- More than 200 workflow actions allow you to build simple to sophisticated workflows

- Connectors to leading collaboration software; file sync and share applications; social media channels; and line-of-business systems

- When combined with Nintex Forms and Nintex Mobile, you can bring the power of workflow to the right people, at the right time, in the right place

With Nintex, you can build simple to sophisticated workflows the way you visualize them, through a drag-and drop interface that requires little to no coding.

See for yourself.
