SECURITY PRODUCTS SUCK

Security and content filtering is complicated. But it doesn't have to be.

As an MSP, you run a tight ship. The tools you use need to work smoothly and reliably. Bonus if they make you money and make you look good to customers. DNSFilter is an A.I. based filter that will stop your users from connecting to internet threats and unwanted content. You can deploy DNSFilter in 5 minutes and manage everything from an online, multi-tenant dashboard.

Quick Setup
One simple configuration change to your network is all it takes. From there, all administration takes place in an intuitive and beautiful dashboard.

Instant Security
No more patches, updates, or security fixes. Our service is continually updated with the latest threat and domain data.

Remote Administration
All customer networks and policies can be easily managed online, by any smartphone, tablet, or PC.

Revenue Building
DNSFilter gives exclusive discounts to MSPs that allow them to build revenue while protecting your customers.

Responsive Partnership
We're built for MSPs. Our roadmap is driven by partner feedback - making sure you get the features you need.

Roaming Clients
The only filter with roaming clients on all major platforms: Windows, Android, iOS, and MacOS, and ChromeOS.
