

METCloud Has Banner Year

Secure cloud platform provider METCloud racked up the awards in 2018! At the Managed Services and Hosting Awards 2018, the company won Most Innovative MSP. At the SVC Awards 2018, the company won IT Security Company of The Year. At the Computing Technology Product Awards 2018, the company won Best Cloud Computing Provider.

Ian Vickers, managing director of METCloud and a member of CompTIA's UK Channel Community, commented on what allowed METCloud to place so widely.

"Cybersecurity is one of the most important concerns within all sizes of business," he said, adding that most small- to medium-sized businesses struggle with implementing a robust defense to cybercrime because they do not have the technical or financial resources. "In response to this, we architected METCloud – an extensive portfolio of security services. We also provide an integrated security management service platform so that clients can significantly improve their security compliance and governance. We also provide security awareness training and monitoring, which helps clients significantly improve overall security of data and intellectual property."

Asked how METCloud plans to evolve or continue these efforts in the future, Vickers said, "METCloud is constantly evolving. Technologies are constantly improving and we are regularly adding new services. We are planning on international expansion [this year], which will include expanding to the U.S., Europe, Asia-Pacific and the Middle East."

METCloud is, understandably, happy to be recognized and looks to build on all this. "We are overwhelmed by our recent success but we are really at the start of a fabulous journey in which we hope to win many more awards and establish METCloud as a global brand."
