

All your remote connections and passwords, from anywhere!

Remote Desktop Manager

Remote Desktop Manager (RDM) is your IT toolbox for streamlining remote connection management by centralizing credentials and offering time-saving automation features.

- Stores and uses passwords securely and connects to commonly used password management solutions
- Integrates with over 200 remote connection technologies, VPNs, and more
- Locally hosts your database securely on a server or in the cloud

Privileged access management for small and medium businesses

Devolutions Server

Devolutions Server (DVLS) is a full-featured, self-hosted data source for Remote Desktop Manager. It offers robust account and password management capabilities and customizable security features at affordable prices for organizations of all sizes.

- Self-hosts your data in a local infrastructure or in a private cloud for conformity and auditing purposes
- Synchronizes user creation and management as well as folder permissions with Active Directory
- Launches secure remote connections without ever revealing credentials

Password management for businesses

Devolutions Hub Business

Devolutions Hub Business is a secure cloud-based data source for Remote Desktop Manager. It allows administrators to store, share, and manage user access to sensitive data. End users can easily access their passwords and secured data through a user-friendly interface.

- Streamlines creating, storing, sharing, and managing passwords, and generates reports
- Raises security awareness among business users with the help of user-friendly tools like a password generator, mobile app, autofill for website logins, and more
- Conforms to strict standards (SOC 2 Type II, SOC 3, ISO/IEC 27001:2013), ensuring the highest level of security for its solutions and services

Secured access to remote networks

Devolutions Gateway

Devolutions Gateway is a companion tool for launching remote sessions from Remote Desktop Manager using Devolutions Server or Hub. Devolutions Gateway can replace complex firewalls and VPNs with secure and easy-to-use just-in-time (JIT) connections to private networks.

- Ensures visibility and rigorous control over connections thanks to detailed session reports and audits
- Secures access to assets in the private network, from anywhere, through certified JIT connections. No need to install a VPN!
- Launches secure internal connections (SSH, RDP, telnet, and websites) without external access to the Internet
- Controls access with MFA for all connections

WHERE **IT** MEETS SECURITY

Founded in 2010, Devolutions is a Canadian software development company located in Lavaltrie, QC.

With more than 800 000 users across 140 countries, its mission is to invent ground-breaking privileged access, remote connection, and password management solutions to help businesses achieve their IT security goals.
