

## Solution Overview

Timus helps MSPs deliver a superior cybersecurity solution to SMBs with identity-based protection, dynamic firewall, and ZTNA in one solution.

### Identity-Based Protection

It's no longer enough to verify a device or an IP address, you need to verify the identity of the person who requests access. That's why

Timus offers identity verification and adaptive multi-factor authentication as central pieces of our platform.

### Dynamic Firewall

Every person is unique and so are their behaviors online. Timus adapts in real time, expanding and limiting access based on the threat profile. A dynamic firewall, a secure web gateway, intrusion protection, and malware detection are all included.

### Zero Trust Network Access

Better safe than sorry. Especially when it comes to protecting against cyber attacks. Timus verifies user identities with a zero trust approach, automatically blocking suspicious behavior.
